

**HealthAll Consulting is here to help you during times of crisis and non-crisis times.**

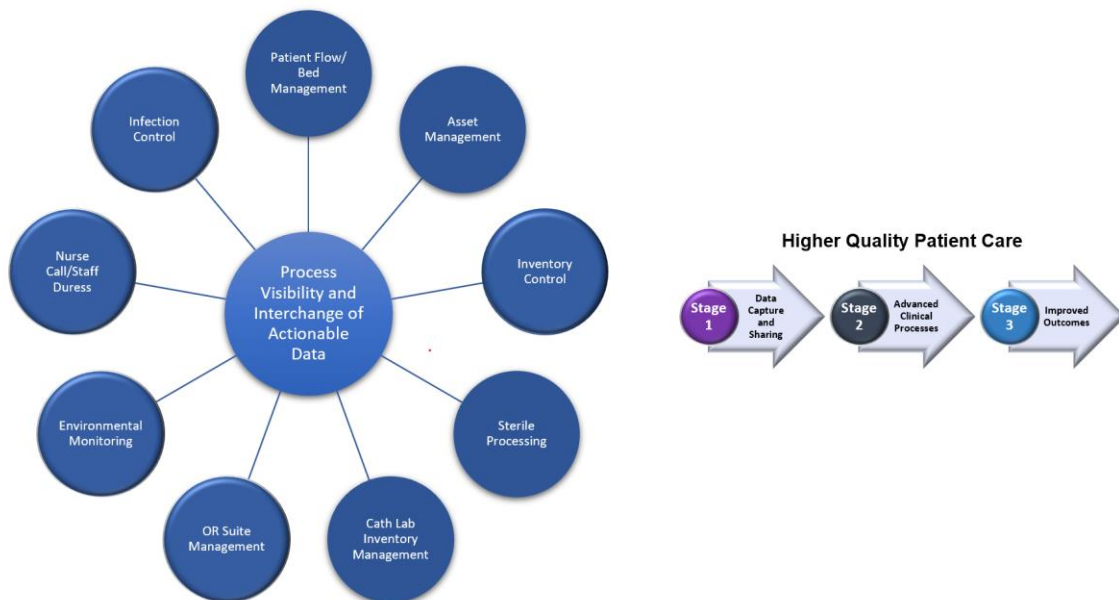

**We are passionately dedicated to making a difference in healthcare and delivering unparalleled results.**

**Our seasoned professionals are available to partner with you today!**

## PANDEMIC – A TIME OF CHALLENGE

Unpredictable global pandemics such as COVID-19 (Coronavirus Disease) demand creative and immediate medical strategies to increase hospital capacity to meet the surge of infected patients. It is also critical to maintain quality and continuity of care for patients not immediately affected by the virus. In times of global health crisis medical centers urgently need autonomous process management solutions to monitor clinical operations, provide efficient in-house patient communication, infection control as well as equipment allocation.

HealthAll Consulting provides solutions for speedy, efficient, and cost-conscious prevention of further spread of the virus. For patients who require regular, non-pandemic related treatments, this boosts their confidence that your care setting is safe for them.

## THE HEALTHALL SOLUTIONS ADVANTAGE

### SOLUTIONS FOR INFECTION CONTROL MANAGEMENT DURING PANDEMIC

Real time Location Service (RTLS) technology is used to improve compliance with infection control policies and practices (e.g., hand washing) to decrease the spread of disease. It tracks patients that may have a communicable disease and tracks their interactions with hospital staff, other patients, visitors, and equipment. The solution also collects, analyzes, and interprets real-time data to recognize and track trends, plan interventions, measure success, and report outcomes.

## Infection Control

### ASSET MANAGEMENT OPTIMIZATION SOLUTIONS FOR CLINICALLY CRITICAL ASSETS

RTLS enhances patient care and throughput by optimizing asset management. With the ability to pinpoint not only the location, but also the status of mobile equipment, RTLS is critical to improving asset utilization and operational efficiency by:

- Automating asset management and improving operational efficiency
- Decreasing equipment loss and reducing waste
- Managing maintenance and recalls

## Asset Management

## PATIENT THROUGHPUT OPTIMIZATION SOLUTIONS

According to the American Hospital Association, the top causes of poor patient flow are communications and visibility of data. Implementing RTLS for hospital staff, patients, and assets medical centers will eliminate many manual processes and enhance patient flow for enhanced patient care.

## BED MANAGEMENT SOLUTIONS

RTLS solutions allows for:

- Reduction of room turnover times by using real-autonomously harvested, real time data.
- Identification of and sharing of room status in real-time with all departments (people and systems).
- Incorporating patient tracking into existing processes.
- Recognizing gaps in patient discharge process.

## Patient flow/bed management
